

Firebase API Key & Configuration Update Manual

Complete Step-by-Step Guide for Manual Firebase Project Migration / API Update

Yeh guide ensure karta hai ki agar future me Firebase project, API Key, ya Database URL change karna ho to `C:\Users\Admin\Documents\decrypt` me kon-kon si file aur kis line par update karna hai.

1. Summary of Target Files & Line Numbers

#	File Path (decrypt/)	Target Lines	App / Module Role	Current Config Type
1	script.js	Lines 284 – 294	Main Admin Dashboard & All Ledger Management	AES Obfuscated (`_secDecrypt`)
2	files/driver_request.html	Lines 943 – 953	Driver Portal Request Form & Report Modal	AES Obfuscated (`_secDecrypt`)
3	files/diesel_filled.html	Lines 336 – 346	Petrol Pump / Station Filling Entry Panel	Base64 Encoded (`dec(...)`)
4	files/index_clean.html	Lines 124 – 134	Backup / Clean Dashboard Standalone View	Base64 Encoded (`dec(...)`)

2. Understanding Firebase Configuration Parameters

Jab aap Firebase Console (Project Settings -> General -> Your apps -> Web app) se credentials copy karte hain, to ye 7 parameters milte hain:

Parameter	Description / Example	Critical for App?
apiKey	Web API Key (e.g., AlzaSy...)	MANDATORY
authDomain	Authentication Domain (e.g., project-id.firebaseio.com)	Optional (Standard)
databaseURL	Realtime Database Endpoint (e.g., https://project-id-default-rtdb.firebaseio.com)	MANDATORY (Live Sync)
projectId	Firebase Unique Project Identifier (e.g., rpm-diesel)	MANDATORY
storageBucket	Cloud Storage Bucket (e.g., project-id.firebaseiostorage.app)	Important for Photos/Vouchers
messagingSenderId	FCM Sender ID Number (e.g., 197454757100)	Notifications
appId	Client Web App Identifier (e.g., 1:197454757100:web:...)	MANDATORY

IMPORTANT NOTICE: Aapko future me update karte waqt kisi bhi encryption ya base64 cipher (`\_secDecrypt` ya `atob`) ka use karne ki bilkul jarurat nahi hai! Aap directly plain text strings (e.g. apiKey: "AlzaSy...") likh sakte hain. Application plain text strings ko 100% naturally accept karti hai.

3. Detailed File-by-File Code Replacement Guide

Step 3.1: Updating script.js (Lines 284 – 294)

Yeh main application dashboard aur database sync ka central core hai. `script.js` open karein aur Line 284 par jayein:

```
// EXISTING CODE in script.js (Lines 284-293): let firebaseConfig = { apiKey:
_secDecrypt('Exk3PhcwBmsIfw07PCAPY2J9dC4KdgQxDSSnFHRqHntZRAhoBGgq'), authDomain:
_secDecrypt('ICAgciAgICAgIHE10TM6UUFFBUz4jNW02PSg='), databaseURL:
_secDecrypt('OiQ5Lzdzanw3PDJ+NCg6QVVeGzs2IyIgPjFy0TE9PRZewktUMDE+0i0mazAqIQ=='), projectId:
_secDecrypt('ICAgciAgICAgIA=='), storageBucket: _secDecrypt('ICAgciAgICAgIHE10TM6UUFFBUzwnKjE0NSBxKjUp'),
messagingSenderId: _secDecrypt('Y2l6a3F9cmZyfw9j'), appId:
_secDecrypt('Y2p8ZnN9cGdyewhiYHFIRVVQDDkycSEwMSc+LXxr0wpZCgFUZGd0PH0='), measurementId:
_secDecrypt('FX11anV8DwsUdAgU') }; // >>> REPLACE WITH YOUR NEW CREDENTIALS DIRECTLY IN PLAIN TEXT: let
firebaseConfig = { apiKey: "AIzaSyYOUR_NEW_API_KEY_HERE", authDomain: "your-project-id.firebaseio.com",
databaseURL: "https://your-project-id-default-rtdb.firebaseio.com", projectId: "your-project-id", storageBucket:
"your-project-id.firebaseio.com", messagingSenderId: "123456789012", appId:
"1:123456789012:web:abcdef123456" };
```

Step 3.2: Updating files/driver_request.html (Lines 943 – 953)

Yeh page drivers dwara request create karne aur vehicle report check karne ke liye use hota hai. `files/driver\_request.html` open karein aur Line 943 par jayein:

```
// EXISTING CODE in files/driver_request.html (Lines 943-953): let firebaseConfig = { apiKey:
_secDecrypt('Exk3PhcwBmsIfw07PCAPY2J9dC4KdgQxDSSnFHRqHntZRAhoBGgq'), authDomain:
_secDecrypt('ICAgciAgICAgIHE10TM6UUFFBUz4jNW02PSg='), databaseURL:
_secDecrypt('OiQ5Lzdzanw3PDJ+NCg6QVVeGzs2IyIgPjFy0TE9PRZewktUMDE+0i0mazAqIQ=='), projectId:
_secDecrypt('ICAgciAgICAgIA=='), storageBucket: _secDecrypt('ICAgciAgICAgIHE10TM6UUFFBUzwnKjE0NSBxKjUp'),
messagingSenderId: _secDecrypt('Y2l6a3F9cmZyfw9j'), appId:
_secDecrypt('Y2p8ZnN9cGdyewhiYHFIRVVQDDkycSEwMSc+LXxr0wpZCgFUZGd0PH0='), measurementId:
_secDecrypt('FX11anV8DwsUdAgU') }; // >>> REPLACE WITH YOUR NEW CREDENTIALS: let firebaseConfig = { apiKey:
"AIzaSyYOUR_NEW_API_KEY_HERE", authDomain: "your-project-id.firebaseio.com", databaseURL:
"https://your-project-id-default-rtdb.firebaseio.com", projectId: "your-project-id", storageBucket:
"your-project-id.firebaseio.com", messagingSenderId: "123456789012", appId:
"1:123456789012:web:abcdef123456" };
```

Step 3.3: Updating files/diesel_filled.html (Lines 336 – 346)

Yeh petrol pump station operator ke liye filling validation page hai. `files/diesel\_filled.html` open karein aur Line 336 par jayein:

```
// EXISTING CODE in files/diesel_filled.html (Lines 336-344): let firebaseConfig = { apiKey:
dec("QUl6YVN5QzhNMTJobGFQUVJPQnFZM0dkX254XzEzQUNhdcFZVjhn"), authDomain:
dec("cnBtLWRpZXNlbC5maXJlYmFzZWwFwcC5jb20="), databaseURL:
dec("aHR0cHM6Ly9ycG0tZGllc2VsLWRLZmF1bHQtcnRkYi5maXJlYmFzZWwvLmNvbQ=="), projectId: dec("cnBtLWRpZXNlbA=="),
storageBucket: dec("cnBtLWRpZXNlbC5maXJlYmFzZXN0b3JhZ2UuYXBw"), messagingSenderId: dec("MTk3NDU0NzU3MTAw"),
appId: dec("MT0xOTc0NTQ3NTcxMDA6d2ViOmZhNGJlY2JhZjkyZDJhOThlNjc5Yzk=") }; // >>> REPLACE WITH YOUR NEW
CREDENTIALS (NO dec() wrapper needed): let firebaseConfig = { apiKey: "AIzaSyYOUR_NEW_API_KEY_HERE", authDomain:
"your-project-id.firebaseio.com", databaseURL: "https://your-project-id-default-rtdb.firebaseio.com",
projectId: "your-project-id", storageBucket: "your-project-id.firebaseio.com", messagingSenderId:
"123456789012", appId: "1:123456789012:web:abcdef123456" };
```

Step 3.4: Updating files/index_clean.html (Lines 124 – 134)

Yeh clean/backup standalone ledger view hai. `files/index\_clean.html` open karein aur Line 124 par jayein:

```
// EXISTING CODE in files/index_clean.html (Lines 124-133): let firebaseConfig = { apiKey:
dec("QUl6YVN5QzhNMTJobGFQUVJPQnFZM0dkX254XzEzQUNhdcFZVjhn"), authDomain:
dec("cnBtLWRpZXNlbC5maXJlYmFzZWwFwcC5jb20="), databaseURL:
dec("aHR0cHM6Ly9ycG0tZGllc2VsLWRLZmF1bHQtcnRkYi5maXJlYmFzZWwvLmNvbQ=="), projectId: dec("cnBtLWRpZXNlbA=="),
storageBucket: dec("cnBtLWRpZXNlbC5maXJlYmFzZXN0b3JhZ2UuYXBw"), messagingSenderId: dec("MTk3NDU0NzU3MTAw"),
appId: dec("MT0xOTc0NTQ3NTcxMDA6d2ViOmZhNGJlY2JhZjkyZDJhOThlNjc5Yzk=") }; // >>> REPLACE WITH YOUR NEW
CREDENTIALS: let firebaseConfig = { apiKey: "AIzaSyYOUR_NEW_API_KEY_HERE", authDomain:
"your-project-id.firebaseio.com", databaseURL: "https://your-project-id-default-rtdb.firebaseio.com",
projectId: "your-project-id", storageBucket: "your-project-id.firebaseio.com", messagingSenderId:
"123456789012", appId: "1:123456789012:web:abcdef123456" };
```

4. Alternative Method: In-App UI (Zero-Code Update)

Aap bina kisi code file ko touch kiye bhi dashboard ke andar se Firebase credentials change kar sakte hain:

Step 1	Main Dashboard (index.html) open karein aur top navigation bar me Developer / Database Settings (Lock Icon) par click karein.
Step 2	Admin passcode daalein aur modal unlock karein.
Step 3	Screen par Database Configuration fields appear honge: • API Key (#dm-api-key) • Database URL (#dm-db-url) • Project ID (#dm-project-id) • Storage Bucket (#dm-storage-bucket)
Step 4	Apne naye Firebase credentials paste karein aur 'Save Credentials' par click karein. Browser automatically naye credentials ko local storage me save kar ke page reload kar lega.

5. Critical Post-Update Checklist

Check	Action Required	Why it Matters
1	Firestore Database Rules Firestore Console me Realtime Database -> Rules me check karein: {".read": true, ".write": true}	Agar rules locked honge (false), to live data entries fetch ya submit nahi hongi.
2	Database URL Ending Database URL ke aakhir me slash / na lagayein. Correct: https://project-name-default-rtdb.firebaseio.com	Trailing slash Firebase SDK me duplicate path error create kar sakta hai.
3	Clear Stale Cache Agar browser purana cache read kar raha ho to: Browser DevTools (F12) -> Application -> Local Storage -> Clear customFirebaseConfig.	Stale local storage override files ke naye hardcoded credentials ko block kar sakta hai.
4	Test Submissions 1 test Driver Request daal kar check karein ki wo Admin panel aur Diesel Filled panel dono me live synchronize ho rahi hai ya nahi.	Full-loop confirmation of Realtime Database sync across all forms.
